## **Listening script**

### **Part 1:**

All living things need water, but water pollution has become a serious problem. Polluted water is unsafe for drinking and for other uses. Water pollution happens when wastes and toxic substances make the water unsafe. There are two sources of water pollution, man made and natural. Man made substances pollute water when they flow into the water from factories and homes. Natural pollution occurs when rainwater with toxic chemicals flows into rivers or lakes. These rivers and lakes are a source of drinking water for humans. Water pollution has a harmful effect on our lives. But there are ways we can reduce water pollution. The first thing we can do is to treat water from factories and households. We should also stop littering, especially dumping waste into rivers and lakes. Finally, we can reduce water pollution by using green products and avoiding single use products like plastic bags.

### **Part 2:**

**A:** Michael, could you tell us what happened?

**B:** Well, it was just a normal evening. My wife and I were cooking dinner and my kids were watching their favorite cartoon. Suddenly, we heard thunder and within five minutes the rain poured down. The tornado was sweeping through our town.

**A:** Wasn't there any weather forecast about this?

**B:** Not at all. We got no warning about it. Then the lights went out. Everything was in the dark. The whole house was shaking because of the heavy rain and strong winds. We thought that it might collapse, but it was dangerous to go outside, so we had no choice but to take cover under the bed, praying for the best.

**A:** How did you feel at that time?

**B:** I was terrified. All our windows were smashed. Dust, rocks and tree branches were blown into our house. We couldn't even open our eyes for a moment. I thought we were going to die. Luckily for us, the bed was made of very hard wood, so we were safe.
